

Features:

1. Template

Home Page with header, top navigation, left navigation, footer and main content area. (Week 3, exercise 5; Week 4, exercise 1; Week 7 videos.)

2. Home Page

Displays information about your topic of choice in the main content area. This could be sample images, research text, or just a short descriptive text introducing your web site. (Week 3, exercise 3; Week 3, exercise 4.)

3. Control Structures

Displays a table of images, with captions, constructed using a loop (for, while, do while, or foreach). (Week 7 videos.) If you home page has a table of images constructed using a loop, you may need to move these loops from the home page to the Control Structures page.

4. String Functions

Displays which of the states have the most similar names. (Week 5, exercise 3.)

5. Web Forms

Displays links to three other projects. (Week 12, exercise 4.)

- a. Add proverb form
- b. Alphabetize form
- c. Sign guestbook form and Show Guestbook page

6. State Information

Displays information about state mechanisms: URLs, cookies, sessions, hidden form fields. Links to a page that can delete the cookie in the visit counter. (Week 14, exercise 3.)

7. Footer

Displays a random proverb in the footer. Displays a visitor count in the footer. The proverb should come from the MySQL database. The visitor count should come from the MySQL database. The visitor count should not update unless the visitor is a new visitor who has never visited the site before. You should determine this based on a cookie you create. (Week 14, exercise 3.)
