

PHP Homework for Week 1

- Introduce yourself on the discussion forum.
 - *Don't start a new thread*, but introduce yourself in the existing thread by replying.
- Install all the software on your computer. Please follow the instructions in the separate installation guide.

1. WAMP or MAMP environment (the Apache, PHP, and MySQL server)

- Download WAMP **only** from <http://www.wampserver.com>
- Download MAMP **only** from <https://www.mamp.info/en/>
- In the past, students who have downloaded from other sites have got viruses and other problems.

2. A programmer's text editor

- Windows: Notepad++ <https://notepad-plus-plus.org>
- Mac: BBEdit <https://www.barebones.com/> (can use some features free indefinitely)
- **Suggested:** Brackets, available for both Mac and Windows <http://brackets.io>

3. An FTP program

- Windows: WinSCP <https://winscp.net/eng/download.php>
- Mac: Fetch (\$) or FileZilla (free)
 - <https://fetchsoftworks.com>
 - You can get a free version if you send your student ID
- Suggested: FileZilla, available for both Windows and Mac
 - <https://filezilla-project.org> (download the client, not the server)

4. An SSH program

- Windows: PuTTY <http://www.putty.org>
- Mac: You can invoke ssh from the command line in the Terminal window
