

PHP Homework for Week 7 : Term Project Checkpoint

Features:

1. Template

Home Page with header, top navigation, left navigation, footer and main content area. (Week 3, exercise 5; Week 4, exercise 1; Week 7 videos.)

2. Home Page

Displays information about your topic of choice in the main content area. This could be sample images, research text, or just a short descriptive text introducing your web site. (Week 3, exercise 3; Week 3, exercise 4.)

3. Control Structures

Displays a table of images, with captions, *constructed using a loop* (for, while, do while, or foreach). (Week 7 videos.)

4. String Functions

Displays which of the states have the most *similar names*. (Week 5, exercise 3.)

Files and folders:

Home Page files:

- index.php

Template Include files:

- header.php
- footer.php
- navigation.php
- styles.css (you may rename this file)

Other pages:

- control.php
- similar.php or strings.php

Images folder:

- Banner image (optional)
- Button images (optional)
- Topic images

Comments:

You may put the include files in a folder called “includes” but be sure to include them properly. This can be particularly difficult when including the navigation.php file in the headers.php file.

You may put the styles in a folder called “css” or “styles” but again, be sure to import them properly.

Do not use Foundation, Bootstrap, jQuery, or any other frameworks when making your web site. This is for your own protection. It can be tricky to use PHP templates with these other tools.
